Time

mea  
pre  
real  
bit

The graph displays four data series over time. The 'bit' series (green) is a step function that fluctuates between approximately 200 and 1000. The 'mea' (blue), 'pre' (orange), and 'real' (purple) series follow a similar trend, starting at 800, rising to 1500 at time 35, peaking at 1800 at time 50, dropping to 1000 at time 65, and then spiking to 2500 at time 115. The 'mea' and 'pre' series show more noise than the 'real' series. The 'real' series is a smoothed version of the 'mea' and 'pre' series.

Time	mea	pre	real	bit
0	800	800	800	1000
5	800	800	800	200
10	800	800	800	600
15	800	800	800	1000
20	800	800	800	600
25	800	800	800	1000
30	800	800	800	600
35	1500	1500	1500	1000
40	1500	1500	1500	1000
45	1800	1800	1800	1000
50	1800	1800	1800	1000
55	1600	1600	1600	1000
60	1600	1600	1600	200
65	1000	1000	1000	1000
70	1000	1000	1000	1000
75	1000	1000	1000	1000
80	1000	1000	1000	1000
85	1000	1000	1000	600
90	1000	1000	1000	1000
95	1000	1000	1000	600
100	1000	1000	1000	1000
